ABOUT

Software Engineer with **5+ years** of experience in designing, developing, and scaling enterprise-grade applications using **Java, Spring Boot, Microservices**, Kafka, Redis, Elasticsearch, and PostgreSQL. Experienced in building secure, high-performance systems for government and financial sectors, including platforms supporting over **12 million users**. Strong expertise in REST APIs, distributed systems, authentication mechanisms, caching, and cloud-ready backend architectures. Adept at working in Agile teams, delivering production-ready solutions, and improving system scalability and performance.

WORK EXPERIENCE

Tekdi Technologies Private Limited, Pune.

January 2024 - Present

Skill India Digital Hub (SIDH) - National Skill Development Corporation (NSDC)

- **Designed and integrated Juspay Payment Gateway** to facilitate secure course and service purchases.
- **Developed and implemented a B2B module** allowing institutional partners to register, make bulk course voucher purchases, and allocate them to candidates seamlessly.
- **Optimized system performance** by introducing efficient caching mechanisms to reduce load times and enhance user experience.
- **Implemented biometric authentication via Aadhaar eKYC** for secure, identity-based login.
- **Implemented Aadhaar eKYC-based Face Authentication** to securely verify user identity and automatically fetch and persist Aadhaar data within the system.
- **Integrated multiple government services including Aadhaar eKYC, DigiLocker, PMKVY, and eSkill** to enable seamless user verification, document retrieval, and skill program access within the platform.
- **Developed a Central Notification Service** supporting multi-channel messaging via SMS, Email, and WhatsApp, enabling seamless and scalable communication with users across multiple platforms.
- **Successfully upgraded application infrastructure from Java 11 to Java 21**, ensuring backward compatibility and improved performance.
- **Enhanced system scalability by migrating performance-critical tables from PostgreSQL to Elasticsearch** for faster indexing and search capabilities.
- **Designed a scalable Two-Factor Authentication (2FA) mechanism** using SMS and Email OTP, integrating Apache Kafka for event-driven OTP processing, securing **12M+ user accounts**.
- **Developed a Community Interaction Module** allowing users to **post content, like, comment, and report posts**, fostering engagement and content moderation.
- **Designed and developed a role-based digital collaboration platform** for MSDE to enable multi-level policy ideation, structured document submissions, and committee-based review workflows across central, state, and district stakeholders.
- **Leveraged tools like SonarQube and Prometheus** for continuous code quality improvement and real-time monitoring of system health.

- **Authored unit tests** using JUnit and Mockito frameworks to ensure code reliability and robustness.
- **Integrated SLF4J for logging** to standardize and streamline application logging and troubleshooting.

Bombay Stock Exchange Limited, Mumbai.

June 2021 - December 2023

- Developed various web applications and APIs for trading related activities in the segments like Equity, Derivative, Commodity and Currency.
- Led a pivotal role in migrating critical APIs from traditional Servlet-based architecture to modern, efficient Spring Boot RESTful service.
- Implemented security measures, including authentication and authorization mechanisms to safeguard the APIs and sensitive data.
- Integrated secured real-time transmission of various files and messages through web sockets by using different file transfer protocols and implemented secure message broadcasting and multicasting in java.
- Successfully tested and deployed code on production using a centralized version control system like SVN.

MatchPointGPS Private Limited, Mumbai.

January 2021 - June 2021

- Gained hands-on experience with cutting-edge technologies such as Spring Boot, Cassandra, MongoDB and Apache Kafka.
- Implemented Restful APIs and utilized Spring Data to seamlessly integrate various databases, including Cassandra and MongoDB, to store and retrieve data efficiently.

TECHNICAL EXPERTISE

Backend & Languages: Java 8 / 11 / 17 / 21, J2EE, Spring Boot, Spring Security, JPA, Hibernate, Servlets, JDBC, RESTful APIs

Data & Messaging: PostgreSQL, SQL Server, Elasticsearch, Redis, Kafka (Event-Driven), Apache Kafka, MongoDB, Cassandra

Frontend & Web: JavaScript, React JS, HTML5, CSS3, JSON, XML, WebSockets (Real-time Streaming)

Cloud & DevOps: Docker, AWS, Git, GitLab CI/CD, SVN, SonarQube, Prometheus (Monitoring), Linux, Maven, Tomcat

PROJECTS

- **Microservice :** Created microservices using Spring boot, JPA, Spring security and connected them with service registry with api gateway, config server and load balancer.

EDUCATION

Bachelor of Engineering (Mechanical Engineering)

August 2014 - June 2018

University : Shivaji University, Kolhapur, Maharashtra, India

COURSES

Javascript Essentials by LetsUpgrade

September 2020 - August 2020

Java Full Stack Development by HefShine Softwares Pune

October 2020 - January 2021
